**Name of the project:**

Health People for a Health Environment.

**Submitted To**

MoH Samburu County: cdhsamburu@gmail.com; fawar175@gmail.com; chir_DEN39@yahoo.com; jmsainain@yahoo.com; MoH Laikipia County: laikipiachountyhealth@gmail.com; ngaricwara@yahoo.com; dr.waheriya@yahoo.com; MoH Isiolo County: cdhisiolu@yahoo.co.uk; MoH Nakuru: cdhnakuru@yahoo.com; MoH Baringo county: cdhhbaringo@yahoo.com; MoH Meru County: cdhmeru@yahoo.com; MoH Marsabit: cdhmarsabit@yahoo.com; MoH Tharaka Nithi County: cdhtharakanithi@gmail.com

**Regions covered by CHAT**

- Presently CHAT is reaching into 12 counties - Laikipia, Samburu, Isiolo, Marsabit, Baringo, Meru, Tharaka, Kitui, Nyeri, Nakuru, Kisii & Narok.
- Menu System (Tana River) – Northern Kitui, Meru and Tharaka
- North Rift Ecosystem – Baringo (East Pokot), Nakuru (Mau Forest)
- Lake Victoria Basin – Kisii
- The Mara – Narok South (opportunity here to scale up through indirect consultancy model)
- North Kenya Mountain Rangelands (includes the Ewaso System) – Samburu, Isiolo, Laikipia, Marsabit

**CHAT Partners**

33 grassroots Health Support Groups/Village Development Committees in Laikipia & Samburu, and 43 Community Own Resource Persons (CORPs): The Nature Conservancy (TNC); Global Fund TB via AMREF; USAID Atya Timiza via AMREF; Mpala Wildlife Foundation; East African Women’s League; Marie Stopes; GoK including the Kenya Ministry of Health & Ministry of Environment; Kenya Wildlife Trust; Community Health & Sustainable Environments UK (CHASE); Community Health Africa Poverty Solutions (CHAPS); Global Giving; Mission for Essential Drugs (MEDS); Suiyan Ltd, Small Foundation Canada; Milgis Trust, St George Trust; Maliasili

**Program Coordinator**

Shanni Wreford-Smith: mobileclinicsafrica@gmail.com

**Reports Author**

Programme Coordinator, Projects Officer, Assistant Projects & Data Officer, Field Coordinator, Field Assistant, Asst Finance Officer, Volunteer Comptroller

**Problem Statement**

A lack of access to family planning information and services contributes to poverty, suffering, and environmental degradation, which negatively impacts communities and their surrounding ecosystems.

#### HIV/AIDS (CBHTCs) - CHAT no longer has funding for this project - therefore a decrease in HIV activities. However, it is a Kenyan policy which makes it compulsory that patients coming for treatment are tested & counselled.
### Activity News

Please note and refer to the above table for our quantitative indicators relevant to this section

"World fertility surveys indicate that anywhere from one third to one half of the babies born in the Third World would not be if their mothers had access to cheap, reliable family planning, had enough personal empowerment to stand up to their husbands and relatives, and could choose their own family size." Donella Meadows

---

**Chat’s implementation model encompasses three core types of interventions:**

(i) Providing access to family planning information and services, using an integrated health approach

(ii) Strengthening community structures

(iii) Engaging in ‘quiet’ advocacy.

The core activities outlined above are delivered by Chat and CORPs through a variety of outreach strategies, reaching people by foot, in vehicles or on camels. These strategies include:

(a) Backpack Outreach Strategy - evolving to be one of the most preferred strategy and sustainable at community level

(b) Motor Mobile Outreach Strategy

(c) Camel Outreach Strategy.

---

CHAT’s financial support acquired from various donors was put towards supporting the implementation of the three key strategies named above.

2) CHAT’s Annual Audit of 2018 was completed by the end of April 2019 and shared with the Trustees. Gently but slowly CHAT has increased its funding over the years - this last year CHAT sourced over USD 600,000

4) CHAT’s updated Strategic Plan covering 5 years is ready adn will be distributed to teh Trustees this next week. This process took much longer than originally thought. CHAT was assisted by a professional American conservation capacity building organization based in Arusha Tanzania, called Maliasili. CHAT feels fortunate to of been given this opportunity. Malisili will now assist CHAT with its fundraising and communications strategy - it is hoped for teh next 2 years!

4) CHAT’s Annual report for 2018 has only just been completed and will be shared. This is the first attempt for CHAT to compile an Annual Report, previously CHAT has been compiling and sharing quarterly reports.

5) CHAT has engaged a Fundraising consultant - Becky who is voluntarily assisting CHAT with fundraising/resource mobilization until December after which I hope we can find funds to be able to cover her consultancy fees. Becky is from UK.

---

**Backpack Strategy:** Fifty two (52) CORPs were supported for the three (3) months under review, CHAT’s primary outreach strategy is the backpack strategy which engages CORPs to go door-to-door in their own and surrounding communities and provide information and counseling on family planning using a population, health and environment (PHE) approach. Working with men, women and other people present in the privacy of their own home allows people to feel at ease and make informed decisions in a confidential and low-pressure environment. The CORPs provides referrals to local health facilities and assists individuals to access the family planning and basic health service they may need. The CORPs also engage with people about broader ecological and social issues that impact the community’s overall well-being.

**Counties reached:** Thirteen (13) counties - Isiolo, Laikipia, Baringo, Kitui, Tharaka Nithi, Narok, Samburu, Meru, Nyeri, Kisii, Marsabit, Nairobi and Nakuru Counties.
1) Nakuru county; Muchwiro, Sektotes, Kiambereria, Hosamwa, Nyanviwa, Gacharage, Tachisia, Karioma, Githinga, Kimaka & Willa.
4) Yarok: Boat, Supiapet, Kiro, Epukata, Olonog’o, Oluskut, Olmeshe, Nkutoto, Entoto, Enskut & Melele.
6) Naiv: Nairutia, Nairutia IDP camps & Kona Mbaya.
7) Niarobi: Dogaret market, Regen, Thogoto, Centre, Gachubi, Kikuyu, WAITA, Mutusini, Regen, Kanyemli.
10) Isiolo: Sanaa, Sanaa IDP camps & Kona Mbaya.

**MOTOR MOBILE STRATEGY (cost shared)**

During this quarter (Jul.-Sept. 2019), various donors enabled CHAT to implement 7 X 10 day camping out mobile. CORPs work with CHAT alongside local opinion leaders and local government representatives to identify areas where communities have limited access to health facilities, significant unmet family planning and health needs and where the cost of accessing medical facilities is a barrier.

**Counties reached:** Four (3) counties - Isiolo, Laikipia and Samburu Counties

**Communities reached:** Over forty (40) communities reached included;

- Isiolo: Sanaa, Sanaa, Ntepes, Lagaama, Olondiro, Longopito, Lemoro, & Kipsing.

**CAMEL MOBILE STRATEGY - (cost shared)**

1 X 6 weeks camel mobile went out from Mid August to early October 2019 completing a six weeks circuit.

In the more remote and difficult to reach areas, CHAT employs the unique strategy of a camel mobile program, which offers integrated health services including family planning, immunizations, antenatal care, child welfare clinics, basic curative treatment and referrals.

**Counties reached:** Isiolo, Samburu, Laikipia

**Communities reached:**

- Isiolo: Marsabit, Goboree, California village, Doldol market, Sagumai, Nsiri, Naibor market, Nkoront, Tool, Kimamajo, Namelok & Ngare Narak.

**Volunteering Monitors**

Between 30 - 12% of each donation will go towards this important activity.

Monitoring and Evaluation (M&E) are important for CHAT as an organization to assess that the project is achieving set targets, understand whether strategic changes need to be made and acted upon accordingly, reviewing milestones and final outcomes and impacts of the projects for the donors to decide on the accountability of the organization, and upon which further collaborations could be established.

CHAT was able to facilitate 3 Government supervisions by accompanying two motor mobile teams and a camel mobile team.

CHAT has an ongoing process of gathering ‘outcome’ & ‘impact’ evaluation data from the communities. The following is the summary of the findings:

1) Individual & community “apathy” (apathy is defined as “a lack of interest or concern”) - however in this case of the project, the main reasons for this attitude could be inadequate understanding of opportunities that could assist with improving personal & environmental wellbeing.

2) Health systems barriers e.g. long distances to health facilities...thus again lack of understanding the importance of fp - the communities need to appreciate that at times it is important they make an effort to ‘go the last mile’ for some services.

3) Undesirable healthcare worker’s attitude e.g. unhelpful nursing in health facilities 4) Stock-outs and lack of long acting reversible contraceptives (in most cases/areas that CHAT targets if there is a health facility the only health facility is a GOK MoH health facilities - rarely also Catholic who do not stock contraception!)

5) Lack of policies facilitating contraceptive provision in schools 6) Community level barriers - e.g women’s experiences with contraceptive side effects. All the above findings were addressed and other elements are used by CHAT to make appropriate informed decisions including targeted resource allocation and re-allocation.
**Program Challenges/Risks encountered**

1. Data collection and analysis are still problems coupled with weakened and dysfunctional health-care systems in virtually all countries across Africa. This makes monitoring and evaluation of programmes a challenging task.

2. Ego at all levels of society

3. Persuading County governments to adjust their budgetary priorities to meet health requirements is a tough challenge. Indeed, in 2001, African leaders made Abuja (Nigeria) declaration with a commitment to allocate 15% of public expenditure to health by 2015 - however, to date, there is still huge funding gaps with the health sector remaining heavily underfunded. This automatically affects the family planning allocation at all levels.

4. There remains unmet Family planning (contraception) needs in all communities. Though studies in Kenya reveal a near universal knowledge on contraceptive methods, yet community practices and our experience has shown the contrary. So, addressing all or some of these barriers responsible will significantly influence service uptake. This is what CHAT thrives to do through their CORPs partners who reach diverse communities using a grass root door to door advocacy - a ‘bottom up’ PHE approach.

5. Illiteracy

6. Apathy at many levels of society is a concern, especially at the grassroot level. CHAT experience that apathy is present when ignorance about family planning and compounded by the lack of access to free contraception

7. There is a need to link population pressure on both the built and natural environments to reproductive health interventions as a national policy to FP service utilization. Though CHAT uses a PHE approach embedded into their family planning intervention, national government is yet to develop a guiding policy on the same.

**Case Story**

A well deserved break

* *not their real name*

As the team was providing services at Ngilati village, a woman, jovial but in some sort of a hurry, said to the mobile clinic driver

*I am so delighted to see this car, please come to Sananguri - there is a wedding tomorrow. We are in great need.* Even before the driver could ask more, the woman had already started striding away.

The driver shared with CHAT’s CORP partner, Pauline, who explained that in the next community, that’s where the wedding would be. The team continued providing their services then made preparations to serve more clients at the wedding the following day.

Early morning, they set camp right outside Sanaguri. Having gone ahead, CORP Pauline had already started sensitizing the community. She specifically started with the lady who had, the previous day, passed by the vehicle. She was called Leyantai* and she had heard about the services offered by the yellow land rover - she wanted to learn more and see if it was an option for her.

Leyantai is a third wife, having been married to a man who only had daughters. She knew she was doomed for she too had the same predicament as her preceding co-wives, having to continue to give birth until it’s a boy. She now had seven girls and no boy yet! She was tired and wanted a rest. She felt like she did not need any more children.

Leyantai knew this was a safe place to access the much-needed help. Her husband was happy and away making merry with his mates, so telling him she needed a little break at this time was not going to be hard.

And indeed, when she shared with her husband after talking to CORP Pauline, so as to understand better, he agreed that she could rest from having a child for some time but on condition that she still had the obligation of giving him a son. Leyantei was the happiest woman at the wedding, even happier than the bride!

She quickly chose and received a five-year protection implant. She knew that this would help her a lot at avoiding unwanted pregnancies for the next few years.

*You have helped me a lot today. Ashe Oleng!* Leyantai said, and then she called all her friends and told them about family planning (fp) immediately she left the service tent.

*This is a very smart woman. I wish we can have hundreds more like her in every community.* CORP Pauline commented as she went back to get some more women from the wedding to inform them about the accessible fp services being offered via CHAT.

*"From China and India to Turkey and Brazil, when women have gotten access to education, to family planning and to a vital place in the economy, greater prosperity has followed. And when women are free to speak and learn, they temper the extremes of ideology and fanaticism and raise sons who are less likely to become human bombs." David Horsey*
